

Mostafa Abdelrazek

Junior Backend Developer | Laravel & PHP

0xM4r5h4l@duck.com | linkedin.com/in/mustafa-abdelrazek | github.com/0xM4r5h4l | hackerone.com/0xM4r5h4l
Cairo, Egypt (UTC+2) | Remote Only | EU/UK: Full Overlap | US East Coast: 4-5hr Sync | Available Immediately

PROFESSIONAL SUMMARY

- **Security-validated:** 3 confirmed IBM HackerOne disclosures (XSS + Auth weaknesses), acknowledged by IBM's security team. I write code thinking about what breaks it.
- **Builder:** Multi-tenant SaaS in Laravel 12 — domain-based tenancy, HMAC-SHA256 session integrity, AES-256 token encryption, and cache stampede prevention in production-ready code.
- **Goal:** Remote Junior Backend role where secure, tested, well-architected Laravel code is valued from day one.

TECHNICAL SKILLS

Languages: PHP 8.2+, JavaScript ES6+, SQL, Bash
Frameworks: Laravel 12, Node.js, Express
Backend: Eloquent ORM, Service Layer, DTOs, Observer Pattern, Sanctum, Queues, Redis, Filament v5
Security: OWASP Top 10, XSS, SQLi, HMAC-SHA256, AES-256, HackerOne VDP, Responsible Disclosure
Testing: Pest PHP, PHPUnit, Feature Testing, Unit Testing
DevOps: Docker, Docker Compose, GitHub Actions CI/CD, AWS EC2/S3, VPS Ubuntu, Nginx

PROJECTS

Multi-Tenant SaaS Platform (In Active Development)

[Laravel 12](#) | [PHP 8.2+](#) | [MySQL](#) | [Redis](#) | [Filament v5](#) | [Pest PHP](#) | [Docker](#)

- **Tenant isolation:** TenantsMiddleware resolves tenants by domain and rebinds filesystem roots and cache namespaces per tenant — data physically isolated at infrastructure level.
- **Anti-hijacking:** HMAC-SHA256 + device fingerprinting (matomo/device-detector) verifies session integrity and blocks hijacking across tenant sessions.
- **Cache stampede prevention:** Randomized jitter ($\pm 5\text{min}$) on high-traffic settings eliminates dogpiling under concurrent load.
- **N+1 prevention:** relationLoaded() guards on all polymorphic Eloquent accessors — predictable query counts as data scales.
- 8 Pest feature tests covering tenant isolation and auth flows — actively expanding.

Beacon Bank API

[Node.js](#) | [Express](#) | [MongoDB](#) | [JWT](#) | [Mongoose](#) | [Jest](#)

- Built a robust financial backend ensuring 100% data consistency through atomic transaction handling, fortified by 5+ security layers to effectively mitigate OWASP vulnerabilities.

SECURITY RESEARCH

IBM HackerOne Vulnerability Disclosure Program

3 Confirmed Vulnerabilities (XSS, Auth Bypass) | [hackerone.com/\[handle\]](https://hackerone.com/[handle]) | Acknowledged by IBM's security team.

EDUCATION

Bachelor of Science in Information Systems | Al-Madina Higher Institute, Egypt | 2024

Languages: Arabic (Native) | English (Professional, C1)
